TELEPHONE — DAY 293, NIGHT 678-J

CHARLESTON or LARGE WAKEFIELD

71 days. Desirable for home and market garden. Head broad heart-shaped, 8 inches broad at base, firm, commonly weighing 4 to 5 pounds. Fully a week later; heads larger and broader heart-shaped than Early Jersey Wakefield.

FERRY'S ROUND DUTCH

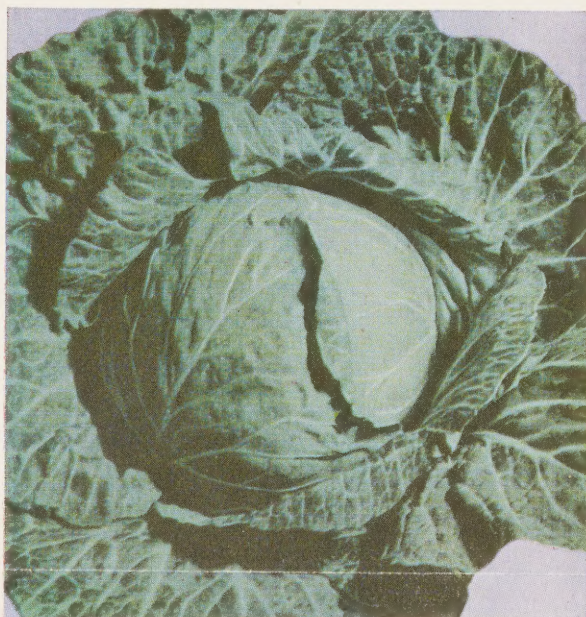

71 days. Splendid for home and market garden. Plants small and compact; stem short. Heads almost ball-shaped, commonly 7 to 8 inches in diameter and 6 inches deep, weighing 4½ to 5 pounds. Firm and of high quality. Slow to produce "seeders."

FERRY'S ROUND DUTCH

COPENHAGEN MARKET

A fine Cabbage. This variety is nearly as early as Jersey Wakefield. The stem is short, and the large, round, solid head has few outer leaves. My stock of this popular variety is extra early, uniform and dependable. A round head, weighing 3 to 3½ pounds, produces headed Cabbage 70 days after plants are set out.

COPENHAGEN MARKET

YELLOWS-RESISTANT VARIETIES CABBAGE PLANTS

RESISTANT DETROIT—(Yellows Resistant). Introduced as an excellent yellows-resistant strain of Golden Acre. Very popular for early markets.

WISCONSIN ALL-SEASON

This is a yellows-resistant strain developed at the Wisconsin Experiment Station by selection of healthy plants of standard All-Season grown on infested land. Wisconsin All-Season is a very valuable, heavily productive, hard-headed variety of particular merit for use in yellows-infested localities, and it is well adapted for kraut and for winter use. Makes heads in 85 days, weighing 6 to 8 pounds.

MARION MARKET

This is also offered as Wisconsin Copenhagen and is a very important midseason yellows-resistant variety for kraut manufacture and market. This variety has prominent globular heads which approach those of Glory of Enkhuizen in size, and it produces a heavy yield on yellows-infested soil where ordinary varieties fail. Matures heads 70 days after plants are set out. Somewhat larger than Copenhagen, but the same shape.

CULTURE — CABBAGE PLANTS

These are frost-proof plants and should stand a temperature of 20 degrees or below. Requires about 12 thousand plants to plant one acre and use from one to two thousand pounds of 4-8-6 fertilizer to an acre. Plant in 3 ft. rows, from fourteen to twenty-four inches in the drill. They should be planted up to the bud, but do not cover the bud. Water and press the soil firmly around the plants. Use Sabadilla dust for control of Harlequin bugs. Use five per cent DDT Dust for all types of Cabbage worms.

GLORY OF ENKHUIZEN

80 days. Attractive, round, solid heads, 7 to 8 in. in diameter, and weighing from 5 to 6 lbs. each. They are exceptionally firm and solid. Leaves are finely ribbed, exceedingly tender and of remarkably fine flavor. Makes excellent kraut, slaw, etc.

FULWOOD'S ONION PLANTS

Genuine FROST-PROOF

Ready September 1 to June 1

A bunch of 100 Onion Plants
ready for shipping.

Southern-grown Onion plants are no longer an experiment. Large quantities are set out every year and they are rapidly displacing sets. They will grow large, sweet Onions early, and are good keepers. They produce Onions two to three times larger than sets, and seldom run to seed. They can be set early, the same time you would put out sets or cabbage plants. Therefore, we strongly advise you to use our plants instead of sets, whether for the market or home use. Our Onion plants are grown from the very best seed, and will be found true to name. These Onion plants should be set out at the same time as cabbage plants, and you can order them for shipment at the same time.

Most Onion plant growers pull Onion plants ahead and store them several weeks before shipping. Such plants cannot produce good crops. Our plants are fresh pulled and shipped the same day and produce better crops.

YELLOW BERMUDA

This is the most widely planted of all Bermuda Onions. No sweeter Onion is grown than this, and it always has a ready market. It is a large producer and a real money-maker. Whether grown for marketing or for your own table, you can make no mistake in ordering this variety.

SWEET SPANISH

The best of the very large mild varieties. One of the original Spanish types, but a better keeper because it was selected for keeping qualities. Deep amber-orange; small neck; globular.

CRYSTAL WAX BERMUDA

Probably the best-selling Bermuda Onion on the market, because of its exceptionally attractive appearance. It looks much like the Yellow Bermuda except that it is crystal white and waxy. Because of its sweet, mild flavor, like the Yellow Bermuda, this is an excellent eating Onion.

CULTURE — ONION PLANTS

These are frost-proof and can stand temperatures below twenty degrees. Plant approximately sixty thousand plants to an acre in 1½ ft. rows, three to four inches in the drill and about two inches deep. Water and press soil tightly around plants. Dust with 5% DDT for thrips.

PRICES ON ONION PLANTS

Onion Plants are tied 100 to a bunch. Shipping weight is 7 lbs. to the 1,000 plants.

FOLD BACK • SAVE FOR FUTURE REFERENCE • PEPPER AND EGGPLANT ON BACK OF THIS PAGE

Bunch of California Wonder Pepper Plants

CALIFORNIA WONDER (Sweet) PEPPER

This is an outstanding medium large variety for market garden and shipping. Plants vigorous and prolific. Fruits four-lobed, chunky, very attractive, smooth, uniform deep green, changing to bright crimson. Flesh thicker than any other variety, sweet and mild. Our stock is definitely superior.

Not Frost-Proof. Ready April 1st to June 15th

Please send all orders to P. D. Fulwood Company, Tifton, Georgia
CULTURE — PEPPER PLANTS. Will not stand frost. Should be planted in 3 ft. rows, twenty-four inches apart. Use approximately seven thousand plants to an acre. Peppers, as a rule, are not bothered seriously by insects.

CULTURE — EGGPLANT PLANTS

Will not stand any frost. Should be planted in 3 ft. rows, twenty-four inches in the drill. Requires approximately seven thousand plants to plant one acre. For the control of insects and diseases use the same material that is recommended for Tomatoes.

SEND ALL ORDERS TO

P D FULWOOD COMPANY, TIFTON, GA.

GUARANTEE

43 Years of Satisfactory Service

We guarantee all of our plants to be exactly as described in this catalog. Fresh pulled day order is received. Plants pulled approximately 50 to bundle and packed to carry to your home in good condition. Any plants arriving in bad condition will be reshipped at once, provided you notify us within five days. When you purchase Fulwood's plants you will receive full count, no runts, no diseased plants. We grow our plants from the very best seed obtainable. Nearly all of our seed are bought from the well known seed firm of Ferry-Morse Seed Company.

We send you only the highest quality plants and gladly stand back of them. However, weather, soil, and care also influence crops, so in no case shall we be responsible for any amount beyond the purchase price.

FULWOOD'S CERTIFIED SWEET POTATO SEED AND PLANTS

UNIT NO. 1 (Copper Skin) VINE SWEET POTATO PLANTS

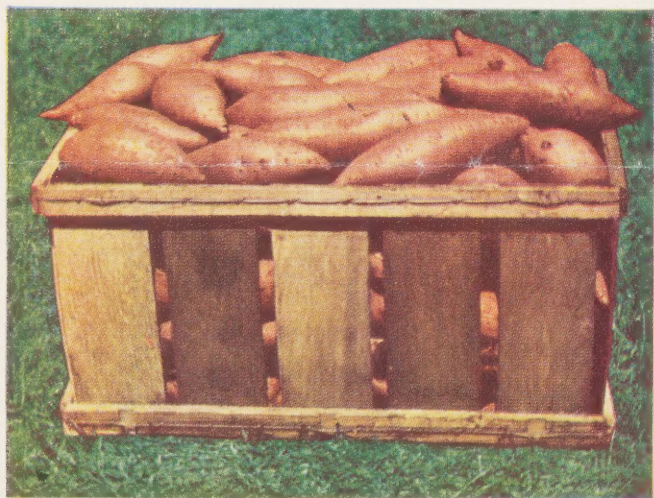

The Potato That Made Louisiana Famous

Not Frost-proof

Ready for shipment about
March 15 to July 1

This variety is very similar to the Bunch Potato. It has an excellent eating quality, pink meat and high sugar content. It makes long vines instead of making a bush.

We can furnish the VINE SWEET POTATO SEED for \$6.00 PER BUSHEL, F.O.B. TIFTON, by express or freight. Shipment can be made any time now and up to April 1st.

Showing a crate of No. 1 Sweet Potatoes
ready for market.

5,000 to 9,000. . . 6.50 per 1000
10,000 and over. . 6.00 per 1000

If you prefer to bed your own potatoes and grow your own plants we can furnish the seed of either variety. These seed are certified and shipped in bushel crates and shipment can be made at any time up to April 1st. Seed Potatoes should be ordered only a week or ten days before ready to put in a hot bed.

CULTURE—BUNCH PORTO RICO SWEET POTATO PLANTS

They should be planted after danger of frost. Use about 800 to 1,000 pounds of 4-8-8 per acre. Plant in 3½-foot rows, 12 inches to the drill, and use approximately twelve thousand plants to plant an acre. They should be on a six- or eight-inch bed. These Bunch Porto Rico Sweet Potato Plants can be cultivated without turning vines and they can be dug without having to cut vines, thus saving about fifty percent of the labor. Follow crop rotation.

BUNCH PORTO RICO SWEET POTATO PLANTS

Not Frost-proof

We can furnish the BUNCH PORTO RICO SWEET POTATO SEED for \$10.00 PER BUSHEL, F.O.B. TIFTON, by express or freight. There is a very short crop on potatoes due to the extreme dry growing season.

BUNCH PORTO RICO SWEET POTATO SEED

Ready Jan. 1st to April 1st

Our new Bunch Porto Rico Sweet Potato Seeds are State inspected, free from disease and certified for shipping to all parts of the country.

This variety, over a five-year period, was tested out by the Georgia Coastal Plain Experiment Station here at Tifton. It has no vines, but grows straight up, making cultivation easier as there are no vines to turn and they are easier to dig for the same reason. They are easy to make live and produce a marketable crop of potatoes about three weeks earlier than the regular vine Porto Rico.

The Georgia Coastal Plain Experiment Station here at Tifton produced 747.38 bushels of Bunch Porto Rico Sweet Potatoes on a measured acre in 1948 under ideal growing conditions. They will produce about 63 bushels per acre more of marketable potatoes than the vine potatoes and will run about 90% U. S. grade No. 1. The Bunch Porto Rico Sweet Potato is a short, "chunky," Copper Skin potato with a red meat and has an exceptionally high sugar content and is excellent for table use. This potato keeps better than most potatoes, and in a very short time will be the leading potato grown throughout the South.

INSTRUCTIONS FOR BEDDING

FULWOOD'S IMPROVED SWEET POTATOES

One bushel of potatoes should pull one thousand plants each pulling for about three consecutive pullings. Choose a well-drained piece of soil on the south side of a building where the sun can hit it all day. Mix approximately three pounds of commercial fertilizer to each square yard of dirt. Place the potatoes far enough apart that they do not touch and cover them with some three to four inches of soil. Keep them moist but not too wet as excessive water makes them cold. You should get your first pulling in approximately six weeks, depending on the weather.

If you desire to make a hot bed for extra early plants write the Georgia Agricultural Extension Service, University of Georgia, at Athens, Georgia, for bulletin No. 533.

DO NOT TEAR OFF • FOLD BACK • FROST-PROOF AND SPRING COLLECTIONS ON BACK OF THIS PAGE

FULWOOD'S GENUINE FROST-PROOF PLANTS

● Vegetables sold early in the season bring many times the price of those marketed several weeks later. Fullwood's Genuine Frost-proof plants produce from two to three weeks before home-grown plants—and that's why they are real money-makers for the buyer.

● Here at Tifton, Georgia, the soil and climatic conditions are ideally suited for growing tough, hardy, healthy plants in the open field during the winter and early spring. The plants make a slow but steady growth and when eight or ten weeks old they are extremely tough and hardy. In this condition they can be shipped farther north and be planted in the open field there a month or six weeks earlier than home-grown, hotbed, or coldframe plants.

● These Frost-Proof plants will stand temperatures of 18 to 20 degrees above zero without injury. Freezing of the soil or covering of the plants with ice, sleet, or snow after they have been planted will not injure them unless the temperature gets below 18 to 20 degrees.

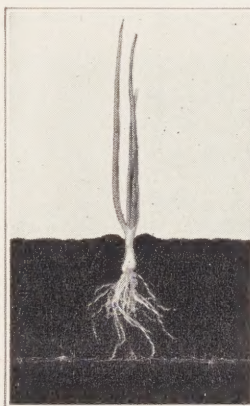

● Because my plants are so strong and healthy, and because they can safely be planted considerably in advance of home-grown plants, they are able to make large, extra-early crops—all ready for market during the time prices are high.

Plant your garden with Fulwood's fine field-grown plants.

PLANTING NOTES: When plants arrive, if your ground is not in condition to plant right away, take the plants out of the crate, cut the bands, spread out and place the roots in soft mud. In planting, pack soil well around the roots, pouring water in the hole after the plants are set out. Throw loose dirt around the plants after watering to keep the wet soil from drying out. Use chart above for proper spacing.

PLANTING CHART

TOMATO PLANTS

BEST CERTIFIED PLANTS GROWN FROM BEST CERTIFIED SEED

My Tomato plants, grown on new land from Certified seed, are certified by the State of Georgia. I grow each season four hundred acres of Tomato plants. They are grown in the open field and when shipped are 8 to 10 inches tall; they are field hardened, stocky, and well rooted. Each bundle of 100 is wrapped with paper to hold the damp moss to the roots. They are then packed in special crates or hampers and shipped by express, and will keep in good condition six to ten days. These plants are not frost-proof and should not be planted until danger of frost is over.

USE FULWOOD'S TOMATO PLANTS AND HAVE RIPE TOMATOES THREE WEEKS EARLIER THAN FROM HOME GROWN PLANTS

The fact that the seed is planted here in February and March gives the plants a chance to become acclimated and toughened by outside temperatures. When set farther North they will start growing quickly and produce rich, red, ripe Tomatoes three weeks before home-grown or hothouse plants. I ship these plants to every part of the United States, and have been shipping large quantities to market gardeners and truckers for thirty-six years. Van Camp Packing Co., of Indianapolis, Ind., uses ten million of my Tomato plants every season. Send me your order for some of these fine plants. You will be more than pleased with the early profitable crop they will produce.
